Success Your Dream With Us.....

Nutrus Combi

Method of use :

● Cereals and pulses - Spray with chelated micronutrients (0.25%) or 1% inorganic micronutrient fertilizer. First spray : At flowering stage. Second spray : 15 days after the first spray or when deficiency symptoms appear. ● Soybean, Groundnut - First spray : spray 15 days after sowing. Second Spray : 55 days after sowing ● Cash crops - (cotton, sugarcane, etc.) 15 days after flowering each Spray at intervals of 2 to 3 times or as per soil, stem, test report or after deficiency symptoms are observed.

● Vegetables - a) Leafy vegetables : First spray 30 days after sowing. b) Fruits and vegetables : 2 to 3 times at an interval of 15 days after flowering sprays.

● Fruit trees- a) Lemon, grapefruit, orange etc. Two sprays of 0.5% concentration micronutrient spray fertilizer or 0.25% chelated micronutrient fertilizer should be applied between March and August. b) Other fruit trees : Two applications at an interval of 15 days after flowering stage sprays.

● For grapes : Two sprays should be applied during the bud formation stage.

Nutrus Calcium

● Nutrus Ca-EDTA is completely soluble in water and contains at least 10% calcium (Ca). The calcium (Ca) is completely in the form of EDTA chelate.

Benefits of Nutrus Calcium :

● Helps prevent problems such as cracking, splitting, rotting, etc., which reduce the quality of fruits due to calcium deficiency in crops. ● Useful in preventing problems such as petal failure and petal rot during flowering. ● Its use leads to better flower development. ● The skin of the fruits becomes hard and becomes flexible and shiny without cracking. 5) Curvy growth is reduced and the swelling of the fruits occurs well. Fruits and flowers remain fresh for a long time after harvesting.

● Relative stability : 4.0-9.0 (in water-soluble state).

● Recommended crops : Grapes, sugarcane, chillies, pomegranates, oranges, cotton, rice, tea, all types of fruits, vegetables, flowers, oilseeds, cereals, pulses and all other crops.

● Dosage : 0.5 to 1.0 grams of Nutrient Ca-EDTA Mix it in 1 liter of water and use it for spraying. The number of sprays should be increased or decreased according to the calcium (Ca) deficiency of the crops. Depending on the requirement of the crop, 0.5-1 kg of Nutrient (Ca) should be used per acre at a time through drip irrigation.

Nutrus Magnesium

Use of Nutrus Mg :

- Spraying with Nutrus Mg-EDTA will help in the growth of When applied through the soil, it is rapidly absorbed by the roots. This leads to vigorous and healthy growth of crops and darkening of the leaves. Its use increases the post-harvest storage capacity of vegetables and fruits. It is used as an inhibitor of mummification in grapes. It helps in maintaining the activity of many enzymes and pathogens. It is beneficial in darkening of grape leaves.
- **Recommended crops :** Grapes, sugarcane, chillies, pomegranates, oranges,Cotton, rice, tea, all kinds of fruits, vegetables, flowers, oilseeds, cereals, pulses and all other crops.
- **Dosage :** 0.75 to 1.0 grams of Nutrient Mg- EDTA should be mixed with water per liter and used for spraying. Apply 500 grams 1 kg per acre through drip irrigation through the soil.

Nutrus Zinc

Symptoms of zinc deficiency :

- Half of the leaf turns yellow It is larger than the leaf, the veins are yellow and the edges are dark green.

Benefits of using Nutrus Chelated Zinc :

- Various Helps reduce flower drop in crops and increase fruit set. ● Produces oxygen in plants. ● Helps maintain uniform size of grapes and other fruits. ● Makes leaves strong and healthy. ● Suitable for soil and spray application.
- **Recommended crops :** Grapes, sugarcane, chillies, pomegranates, oranges,Cotton, rice, tea, all kinds of fruits, vegetables, flowers, oilseeds, cereals, pulses and all other crops.
- **Dosage :** 0.5 to 1.0 grams of Nutritive Zn-EDTA should be mixed with one liter of water and used for spraying. Use 500 grams per acre of soil.

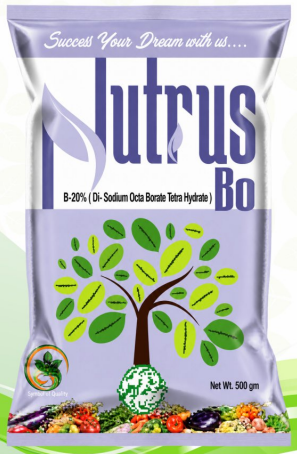

Warranty : As the use of this product is beyond our control, we cannot assume any liability without warranty.

Nutrus Boran

Use of Nutrus B :

● Nutrient boron is an element that promotes the division of the pen and the formation of the tip and Helps in the process of increasing hairs in the roots. Helps in the growth of all the organs of the vine. Helps in the solubility of calcium in the vine and its migration. Boron helps in the absorption and transport of water. Helps in increasing the efficiency of pollen and animate.

Major causes of boron deficiency of boron :

● Deficiency causes reduction in the number of buds. As a result, the berries become wrinkled and yellow spots appear in the leaf veins, which later turn reddish. The leaf stalks become wrinkled and thick. Due to boron deficiency in grapes, the size of the berries in the bunch is not uniform. In pomegranates, cracking (fruit cracking) is observed due to boron deficiency.

● **Recommended crops :** Grapes, sugarcane, chillies, pomegranates, oranges, cotton, rice, tea, all types of fruits, vegetables, flowers, oilseeds, cereals, pulses and all other crops.

● **spray rate :** 0.5 and 1 gram per liter of water. 2 and Apply 3 sprays at 15 and 20 day intervals during flowering and fruiting stages as per the requirement of the crops.

Nutrus Ferrous

For the control of iron deficiency (Kevda)

● Nutrus Fe is a modern product in the EDDHA Chelated form of Fe. It can be applied through drip irrigation or by sprinkling.

Benefits of using Nutrus Chelated Ferrous :

● Also in calcareous Soils with a pH of more than 8. ● Iron can not be available to such crops. ● It works effectively in such soils. ● Fersol availability is maintained even in soils with a pH of 4 to 11. ● Use neutral Fe to eliminate the problem of iron chiasm in calcareous soils.

How to use Nutrus Ferrous :

● For one acre, 1 kg. Nutrus Fe should be dissolved in 100 liters of water and applied through drip irrigation. ●after applying Nutrus Fe, apply 50% less water than usual through drip irrigation for 3 days.

Note : Nutrus Fe should not be used for spraying on crops.

Nutrus Calibar

Advantages of Calibar :

● For abundant and early flowering. ● To reduce fruit rot ● Effective as a preventive against desiccation, mummification in grapes, fruit cracking in pomegranates, fruit rot in tomatoes, chillies, etc. ● To increase the size and firmness of fruits ● For the formation of sugar in the fruit

Uses of Calibar :

● Calibar is the only product based on chelated calcium, magnesium, boron and zinc. Since boron is an aid in the transport of calcium and magnesium, Nutrus Calibor is very effective. ● Calibor is very useful in all stages of crop growth.

Caliber Usage Method :

1 gram per liter for spraying.
500 grams per acre through drip irrigation.

Micrionutrient Ms, Grade No.9 Analysis (As per FCO)	
Zn-3%	B-0.5%
(EDTA Chelated)	

Typical Analysis	
Zn-3%	Ca - 7%
B-2%	Mgo-3%
(EDTA Chelated)	

Silica Grow

Benefits of silica-grow in crop production:

● Protects the crop from killing sap-sucking insects. ● Reduces the severity of fungal and bacterial diseases. ● It helps increase food storage in crops by increasing photosynthesis. ● Helps reduce the residue of chemicals sprayed on crops. ● Increases the availability of phosphorus and potassium when applied through soil fertilization. Water evaporation through stomata is greatly reduced. ● This helps to avoid wastage of water, makes the fruits shiny and increases the darkening of the crops. ● Post -harvest storage period of fruits and vegetables Can increase. ● Losses due to fruit rot during storage can be reduced to a great extent. ● Prevents root rot disease to a large extent.

Directions for use : 1.5 to 2 grams of Silica Grow per liter of water. Spray according to the growth stage of the crop. Dissolve Silica Grow in water for half an hour before spraying. Stir the mixture every time while spraying.

Root Star

● Nature of Product : Black brown coloured formulated salt of Humic Acid. Water soluble powder with potassium.

Benefits of Use :

● Root Star 98 W.S.P. Improves physical, chemical & biological properties of soil. Root Star 98 W.S.P. ● Helps improves white root development.

Application :

1) Seed treatment :
● Vegetable Seeds : 10gm/10lit. of Water.
● Grain Seeds : 15gm/10lit. of water.
2) Dipping Roots Dipping : 10gm/10lit. of water.
3) Drip Irrigation (Fruit Crops) : 500 gm per Acre at a time.
4) Soil Dreanching (All Crops) : 500 gm 10 lit. at a time.
5) Foliar Spray (All Crops) : 3 gm 10 lit. of water.

Pick-Up

Benefits of Pick-Up :

● Pick-up is plant bio-stimulant containing 6% Humic acid substance Fortified with toot promoting media & Amino acid. Auxins extracted from organic matter. Pick up is best Cheltating agent ● Pick-up increase yield parameters such as numbers branches, panicle numbers, buds, flowers, grain numbers and grain weight. ● Pick-up accelerates plant metabolic process & helps inhanced uptake of nutrients. ● Pick-up omproves soil texture by binding soil practicles enhancing soil porosity. ● Pick -up is higher cation exchange capacity helps higher nutrients availability and prevents leaching nutrients.

Doses : Pick-up should be used 5 to 10 kg/acre. Can be mixed with other fertilizer.

Composition :

Amino Acid - 5%	:	5%
Seaweed 4%	:	4%
HUMIC ACID 6%	:	6%
FILLER 85%	:	85%
TOTAL 100%	:	100%

Success Your Dream With Us.....

Nutrilight

Use Nutrilite for All Vegetables, Fruits & Other Crops like Tomatos, Capsicum, Grapes, Pomergranate, Sugarcane Cotton, Wheat, Paddy, Oilseeds, Flowers etc.

Dose : Use Nutrilite 10 kg / Acre.

Composition :

Zn-3%	Mn-1%
Cu-1%	B-0.5%
Fe-2.5%	Mo-0.1%

1350

J. R. Agro's micronutrients for spraying at a dose of 1350 grams per acre
(To be given from 300 to 350 liters of water)

Component		Weight
Magnesium sulfate	:	550 grams
Zinc Sulphate	:	250 grams
Ferrous sulfate	:	250 grams
Manganese sulphate	:	200 grams
Boric acid	:	100 grams

JR Agro Chemicals

Nutrus Prom

Phosphate Rich Organic Manure
Sutiable for Organic Farming

Composition :

Total Nitrogen as N	:	0.40% min
Total Phosphate as P_2O_5	:	10.40% min
Total Organic Carbon	:	7-8 (% by Wt. Min.)
C:N Ratio	:	<20:1
Moisture	:	25% max

Sugar Special

Benefits of Sugar Special :

The length of the pods is increased by balancing the rate of sprouting of sugarcane. Its use fills the deficiency of nutrients and micronutrients in sugarcane. This leads to vigorous and healthy growth of sugarcane. Its use keeps the sugarcane green and helps in the production of green matter well. Due to this, the amount of bagasse in sugarcane decreases and the amount of sugar increases, increasing the sugar content by 25 to 30%.

Dose :

The first spray should be given 25 to 30 days after sugarcane emergence at 2 ml per liter of water and the second spray should be given 2 ml per liter of water after 50 to 60 days.

Contents :

Amino Acid	:	15%
Seaweed Extract	:	07%
Other Ingredients	:	78%
Total	:	100%
